DETAILED ACTION

Election/Restrictions

Applicant's election without traverse of Group III, claims 10-16, in Paper No. 9 is acknowledged.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 10 and 11 are rejected under 35 U.S.C. 102(b) as being anticipated by Kuslich et al. (U.S. 5,445,639). Kuslich et al. teaches a reaming head, comprising: a body 24 having a longitudinal axis and an outer surface defining a longitudinally

extending substantially cylindrical configuration extending over a majority of the circumference of said outer surface and a truncated surface 35 interrupting said substantially cylindrical configuration; a cutting element 40/42 positioned in said truncated surface 35; wherein said cutting element 40/42 is a blade extending in substantial alignment with said longitudinal axis.

Claims 10 and 12 are rejected under 35 U.S.C. 102(e) as being anticipated by Anctil et al. (U.S. 5,922,003). Anctil et al. teaches a reaming head comprising: a body 24 having a longitudinal axis and an outer surface defining a longitudinally extending substantially cylindrical configuration extending over a majority of the circumference of said outer surface and a truncated surface 30 interrupting said substantially cylindrical configuration; a cutting element (teeth at 30 in Fig. 1) positioned in said truncated surface 30 and further including a rounded leading surface 28 adjacent said cylindrical configuration.

Allowable Subject Matter

Claims 13-16 are allowed.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Borzone et al. (U.S. 5,122,134) and Edwards et al. (U.S. 6,258,093) have been cited as teaching reamers related to the present invention.

Bonutti (U.S. 5,403,317) and Muller et al. (U.S. 5,690,634) have been cited as teaching reamers with discontinuities in the reaming heads.
